

RESEARCH

- Generate, develop and package bio-system technologies through research;
- Improve and modify existing production system towards the direction of modern and more productive agriculture;
- Maintain, produce and distribute improved genetic planting materials and quality breeding stocks (*hybrids and inbreeds*);
- Collaborate with relevant research institutions, LGUs, SCUs, and NGOs;
- Plan and integrate RD & E programs;
- Monitor and evaluate implemented RD & E programs;
- Knowledge product dissemination through LGUs, NGOs, NGAs, and other GOs;
- Conduct specialist training courses and briefings in collaboration with ATI, LGUs and NGOs; and
- Provide and facilitate laboratory services (*animal clinic, plant pest clinic, and mass production of biocon agents*).
